
ASCO Filtri MCR Cartridge Filter Housings

ASCO Filtri Srl is pleased to introduce our MCR range of cartridge filter housings. Designed to replace the older MTR range, the new range of housings provide the end user with a number of significant benefits.

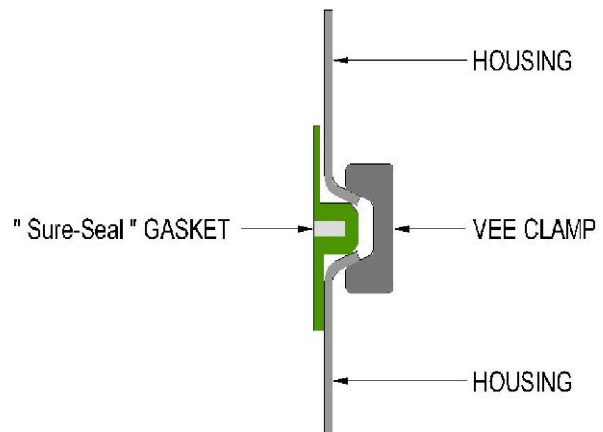

- Innovative “split shell” design for ease of cartridge installation and inspection.
- V-Clamp closure system to reduce filter downtime and costs
- Sure-Seal gasket configuration to guarantee sealing even in low pressure applications
- Suitable for DOE or M3 style filter elements
- Now extends to up to 9 x 40” filter cartridges as standard for flow rates up to 50m³/hr
- Adjustable SS 304 legs make the housings easy to install

Easy Cartridge installation

The mid-height opening of the MCR series facilitates cartridge installation and enables a full inspection of the filter prior to bowl closure. The shorter height of the base of the filter also permits manual cleaning of the complete filter housing where required.

Sure-Seal system

In some low pressure applications, or in cases where a vacuum is used to drain the housings, the issue that can arise with a V-Clamp closure system is failure on the O-Ring sealing. ASCO Filtri have designed a fail-safe sealing system that moulds itself to the contours of the housing even in low pressure applications removing the risk of leaking.
